

**AMENDMENTS TO THE CLAIMS:**

The listing of claims will replace all prior versions, and listings of claims in the application:

**LISTING OF CLAIMS:**

1. (Currently Amended) In a document processing system with at least one document processing subsystem where a job, including a set of images represented by a set of image data, is processed multiple times and in multiple independent renderings, in response to input provided by a user, to obtain first and second job processing events of the job corresponding to the first and second renderings, respectively, a method comprising:

programming a first job control ticket with a first set of attributes, the first job control ticket controlling a manner in which the job is to be processed in the first job processing event;

programming a second job control ticket with a second set of attributes, the second job control ticket controlling a manner in which the job is to be processed in the second job processing event; linking a master job control ticket with user selectable global attributes and user selectable individual ticket attributes to the first and second job control tickets wherein the global attributes comprise first properties of the first and second job control tickets and the individual attributes comprise second properties of a selected individual one of the first and second job control tickets and wherein the first and second job processing events are based on the same set of image data;

linking the master job control ticket with the first and second job control tickets and the set of images so that, with one submission of the job to the document processing subsystem, the job is processed in the first job processing event with the first job control ticket and in the second job processing event with the second job control ticket so that the same job data is applied to the first and second job processing events, wherein the job need not be submitted multiple times to the document processing subsystem to accommodate the multiple renderings.

2. (Original) The method of **claim 1**, further comprising linking the first and second job control tickets with a master job ticket including first and second user selectable portions corresponding respectively with the first and second job control

tickets, wherein each first and second user selectable portions is selected to cause the job to be processed in the first job processing event with the first job control ticket and in the second job processing event with the second job control ticket.

3. (Original) The method of **claim 2**, further comprising providing the master ticket with a third user selectable portion, the third user selectable portion corresponding with an instruction, wherein when the user selects the third user selectable portion an operation is performed globally in each first and second job processing events.

4. (Original) The method of **claim 1**, in which a third job control ticket controlling a manner in which the job is to be processed in a third job processing event is programmed and the third job control ticket is referenced to the set of images, further comprising linking the first, second and third job control tickets with a master job control ticket including first, second and third user selectable portions corresponding respectively with the first, second and third job control tickets, wherein one or more of the first, second and third user selectable portions are selected to cause the job to be processed in one or more of the first job processing event with the first job control ticket, the second job processing event with the second job control ticket and the third job processing event with the third job control ticket.

5. (Original) The method of **claim 1**, further comprising editing at least one of the first and second job control tickets.

6. (Original) The method of **claim 5**, wherein said editing includes leaving the master job control ticket unaltered.

7. (Original) The method of **claim 5**, wherein said editing includes changing one or both of the first and second sets of attributes

8. (Original) The method of **claim 5**, wherein said editing includes deleting both the first job control ticket and first user selectable portion.

9. (Original) The method of **claim 1**, wherein said method includes generating a first output by producing prints of the set of images in the first job processing event and generating a second output by producing prints of the set of images in the second job processing event.

10. (Original) The method of **claim 1**, wherein said method includes performing a first set of one or more image processing operations on a copy of the set of images in the first job processing event and performing a second set of one or more image processing operations on a copy of the set of images in the second job processing event.

11. (Original) The method of **claim 1**, wherein said method includes performing a first set of make-ready operations on a copy of the set of images in the first job processing event and performing a second set of make-ready operations on a copy of the set of images in the second job processing event.

12. (Original) The method of **claim 1**, further comprising configuring the first and second job control tickets so that the first set of attributes includes at least one attribute corresponding with a first type of offline finishing and/or the second set of attributes includes at least one attribute corresponding with a second type of offline finishing.

13. (Original) The method of **claim 12**, further comprising creating a hardcopy sheet including representations of one or both of the at least one attribute corresponding with the first type of offline finishing and the at least one attribute corresponding with the second type of offline finishing.

14. (Original) The method of **claim 1**, further comprising linking the first and second job control tickets with a master job ticket including first and second selectable portions corresponding respectively with the first and second job control tickets, wherein the first selectable portion is selected , and the second selectable portion is not selected, wherein the job is processed in accordance with the first job control ticket, but not in accordance with the second job control ticket.

15 - 21. (Cancelled)

22. (Previously presented) In a document processing system with at least one document processing subsystem where a job, including a set of images represented by a set of image data, is processed multiple times and in multiple renderings, in response to input provided by a user, to obtain first and second job processing events of the job corresponding to first and second ones of the multiple renderings, a job ticket control system comprising:

- a first job control ticket with a first set of attributes, the first job control ticket controlling a manner in which the job is to be processed in the first job processing event;

- a second job control ticket with a second set of attributes, the second job control ticket controlling a manner in which the job is to be processed in the second job processing event;

- a master job control ticket with user selectable global attributes and user selectable individual ticket attributes within the master job control ticket for multiple alternative renderings of the same set of image data, wherein the global attributes are linked to the first and second job control tickets for affecting global properties of the first and second job control tickets and individual attributes are linked for affecting individual properties of a selected individual one of the tickets;

- the master job control ticket, the first job control ticket, and second job control ticket being linked with the set of images; and

- wherein, in response to a single submission of the job to the document processing subsystem, the job is processed in the first job processing event with the first job control ticket and in the second job processing event with the second job control ticket based on the same set of image data, wherein the job need not be submitted multiple times to the document processing subsystem to accommodate the multiple renderings.

23. (Original) The job ticket control system of **claim 22**, wherein the document processing system includes a printing subsystem.

24. (Original) The job ticket control system of **claim 23**, wherein said printing subsystem includes a xerographic printing device.

25. (Previously presented) The method of **claim 1**, wherein the master job control controls other master job control tickets and individual job control tickets, and wherein the lower level master job control tickets may include individual job control tickets and master job control tickets.

26. (Cancelled)

27. (Previously presented) The method of **claim 22**, wherein the global and individual attribute selections in the master job control ticket only change the attributes of the first and second job control tickets when used under that master job control ticket and do not change the attributes of the first and second job control tickets globally such as when the tickets are used under another master job control ticket.
